

# ONLINE QUIZZES

E-assessment has two key advantages: it substantially reduces teacher work time on assessments and allows for rapid teacher feedback on student. University of Cordoba used online quizzes as a teaching and assessment tool in the general program of the subject Projectos, to test quizzes effectiveness on student performance when used, not only as an isolated assessment tool, but also when integrated into a combined strategy, which support the overall programming of the subject. The course was divided into 3 parts and students had to finish 6 online quizzes (2 for each part) during the school year.

## Main challenge, Key Success and Enabling Factors

- Quizzes were intended to capture students' attention regarding the most relevant concepts of the subject and to link those concepts to other subject activities in order to increase participation and effectiveness of group tutorials and practical classes.

## Lessons Learnt and Recommendations

- The use of online quizzes had a very positive impact on academic outcomes.
- In the future, we could consider eliminating the theoretical section of the lesson and substituting it with quizzes.
